U.S. SPACE FORCE

LOGO GUIDELINES AND
BRANDING IMPLEMENTATION

AUGUST 2021

INTRODUCTION

As the newest branch of the armed forces, the United States Space Force stands poised at the very limits of our nation's defense. As it strives to fortify U.S. and allied interests in space, it is critical that the USSF establishes itself as a sophisticated, dependable entity. This can be accomplished

partially through purposeful and consistent branding.

The USSF logo is at the core of its brand. As such, it should be rendered with exactness in every instance. These guidelines were created to define the standard rules for logo use

in a wide range of scenarios. Other brand elements, such as color and typography, are also prescribed. Your diligence in following these guidelines is appreciated and will serve to strengthen the USSF and its brand.

U.S. SPACE FORCE LOGO SYMBOLISM

The delta symbol was first used in 1961 and honors the heritage of USAF and Space Command. It has served as inspiration in the space community ever since.

The silver outer border of the delta signifies defense and protection from all adversaries and threats emanating from the space domain.

The black area inside embodies the vast darkness of deep space.

Inside the delta, the two spires represent the action of a rocket launching into the outer atmosphere in support of the central role of the Space Force in defending the space domain.

The four beveled elements symbolize the joint armed forces supporting the space mission: Air Force, Army, Navy and Marines.

In the center of the delta is Polaris, the star which embodies the guiding light of security and defending the hopes and dreams of space.

UNITED STATES SPACE FORCE VERTICAL LOGO

The version of the logo that has "UNITED STATES" written out should only be used for official use by the office of the Chief of Space Operations. It should only be used in such cases as formal stationary or as backdrop/signage at press conferences. Do not use on merchandise like T-shirts, coffee mugs, etc. Instead, replace it with the "U.S. Space Force" and "USSF" versions.

ISOLATED DELTA LOGO

In rare circumstances, it may be appropriate to separate the delta logo from its accompanying typography. These exceptions will primarily occur in digital platforms where limited resolution hinders legibility. These instances require approval by the USSF Intellectual Property Management Office on a case-by-case basis.

CHOOSING WHICH LOGO VERSION TO USE

With such a wide range of logo options, it is important to choose the correct version for each project. Here are a few guidelines for making that decision.

FIRST: WIDE SPACE VS TALL

Decide whether you will need a horizontal or vertical configuration. This will largely be determined by your “canvas size.” If space isn’t limited, default to the vertical version.

SECOND: MAKE IT LEGIBLE

If the logo is going to be reproduced at a smaller size, use the USSF abbreviated logo versions to ensure legibility. These versions can also be used at larger sizes where brand familiarity is established.

THIRD: LEVEL OF DETAIL

Wherever possible, use the multicolor gradient versions of the logo. However, there are many instances where the reproduction of gradients isn’t possible. In these cases, use the multicolor flat versions. As reproduction processes become even more limiting (e.g., stitching or screen printing) choose the one-color version that works best.

LOGO EXCLUSION ZONE

There should always be an exclusion zone free of any graphics or text surrounding the USSF logo. The minimum exclusion space is found by taking 1/2 the width of the logo (x) and applying that distance from the outer edges of the USSF logo.

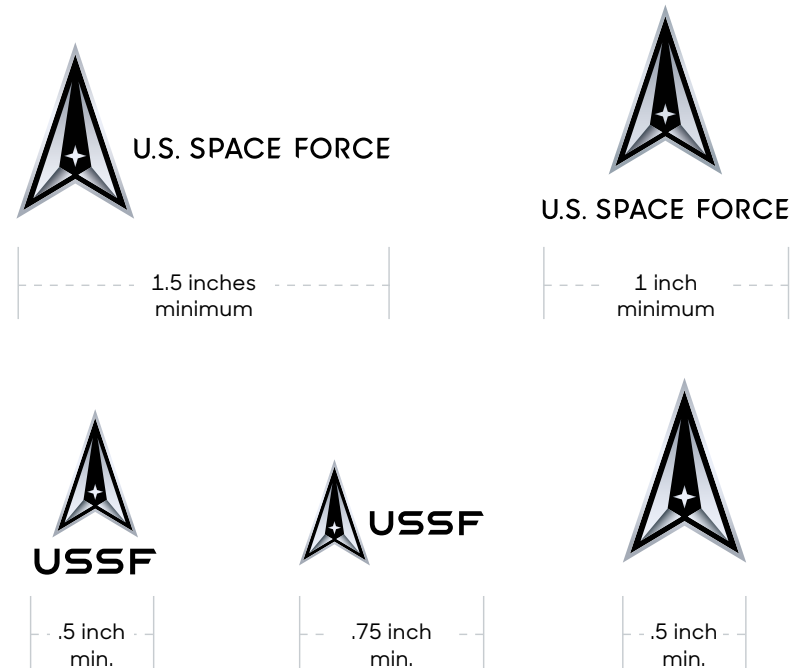

LOGO CONSIDERATIONS

When using the silver secondary versions of the logo, they must be used on dark backgrounds. The USSF logo is designed so that the star Polaris and the beveled spires are always lighter than their background.

To make sure the logo is always clear and legible, there is a minimum size requirement. The minimums for print are listed below. For digital executions, ensure that the type is easily legible and the logo elements are distinguishable.

INCORRECT LOGO USAGE

USE WITH THE USAF LOGO

In some scenarios, it may be necessary to display the USSF logo alongside the USAF logo. In these instances, please use one of the following options shown below. The one-color versions of the USSF logo are used to maintain uniformity between the two logos.

One color (Black)

One color (White)

COLOR PALETTE

The USSF color palette is overwhelmingly black, white, silver and gray. These tones are timeless and sophisticated and reflect the starkness of our solar system.
